PRODUCT INFORMATION

Heat is dissipated through the aluminum housing, allowing the R130 to be run at a higher current and a greater intensity. Its simple plug-and-play 5-pin M12 connector is easy to use. The 10%-100% intensity control gives users full control over light output. A standard 42 mm inner hole diameter allows for use with nearly all camera systems with available step-up and step-down conversion kit adapters.

WIRING CONFIGURATION

Pin	Function	Signal	Wire Color
1	Power In	+24VDC	BROWN
2	NPN	Sinking Signal	WHITE
3	GND	Ground	BLUE
4	PNP	Sourcing Signal	BLACK

NOTICE

If Analog 1–10VDC is not used to control light intensity,
analog input must be connected to
+VDC (24VDC) — jumper pin 5 to pin 1.

ILLUMINATION

R130 Series of Ring Lights works best for:

EYE SAFETY

According to IEC 62471:2006. Full documentation available upon request.

Notice

Exempt Group: No photobiological hazard to eyes or skin even for continuous, unrestricted use. Applicable for wavelengths 625, 850, and 940.

Caution

Risk Group 1: Possibly hazardous optical radiation emitted from this product. Do not stare at operating lamp. May be harmful to eyes. Safe for most applications except prolonged exposure. Applicable for wavelengths 470, 505, 530, and WH1.

Notice

Risk Group 1: UV emitted from this product. Minimize exposure to eyes and skin. Use appropriate shielding. Safe for most applications except prolonged exposures. Applicable for wavelengths 395.

Caution

Risk Group 2: UV emitted from this product. Eye or skin irritation may result from exposure. Use appropriate shielding. Does not pose optical hazard if aversion responses limit exposure. Applicable for wavelengths 365.

LENS OPTICS

WIDE (STANDARD)

Wide, 30° angle-cone lenses project a large area of illumination. They create a floodlight effect, can be used for short working distances.

NARROW

Narrow, 14° angle-cone lenses project a narrow beam of illumination and are used for long working distances.

** Additional lens options available upon request.*

When to Use a Linear Polarizer?

Polarizing filters can reduce reflections on specular (Dielectric or nonmetal) surfaces.

A Linear Polarizer has a typical transmission of 38 percent while blocking 62 percent of the light not in the polarization plane.

WARNING: Running a light in continuous operation while using a standard polarizer with certain wavelengths (e.g. white, blue) may burn off the polarizer.

STEP-UP/STEP-DOWN ADAPTER KITS

Step-Up/Step-Down Adapter Kits allow the M46 thread on ring lights to be mounted directly to the threads found on the front-end of most popular lenses.

Step-Up Adapters allow for mounting a lens that is smaller in diameter to an EZ Mount Ring Light, while Step-Down Adapters allow for mounting a larger lens to an EZ Mount Ring Light.

These kits include: a set of screws and a hex wrench.
